

# C3 Corvette Vacuum Line Dress-up Kits

We're confident that our Dress-Up Kit will give your engine that ultimate car show look! Our vacuum lines are made of the highest-grade polymer silicone designed specifically for automotive use.

Note: This kit is designed for Corvettes with modified small block engines but may fit other larger motors.

## Vacuum Line Dress-Up Kit Contents:

- Vacuum Advance Line (smallest diameter)
- Carburetor to Canister Line (next larger size)
- Vacuum Reservoir/Automatic Transmission Lines (next larger size)
- PCV & Brake Booster Lines (largest diameter)
- Part "E" - Line Connector for Vacuum Reservoir Line

## Instructions:

1. **Begin with laying out the new vacuum lines on a flat surface.** Note that each line is tagged with a letter for the vacuum line it is designed to replace above.
2. **Cutting and Fitting Lines –** (Please refer to pictures below and on the right.) Once you have determined where each line will go, match or measure the lines before cutting. Note that some lines will fit multiple vacuum line fittings. For the "Carburetor to Canister Line" (driver side), a plastic connector is enclosed to connect with the existing hose located on the firewall.

The "Headlights Vacuum Reservoir Line" (passenger side of motor), connects to the Check Filter Valve (usually white) and then connects to the Check Valve (metal) behind the distributor along

the firewall. Keep the existing line connected to the end of the Check Valve. This line runs to headlights.

Driver Side

Passenger Side

3. **Cleaning and Care.** For cleaning and maintaining the brilliance of this product, use an interior shine product such as Armour All, WD-40 or any other similar product. For questions, please call 208-801-8179.

**Warning:** These polymer lines are designed for vacuum line purposes only and should not be substituted for fuel or high-pressure lines.
